Dream Guide Company

Company introduction

Founded in 2017, Dream Guide Company has been providing IoT student safety management system 'School Check' to kindergartens, schools, and universities in Korea. In addition, our company supplied Smart Factory Systems, Factory Quality Management System Based on big data platforms, and logistics management systems to large companies.

Dream Guide Company, as a venture company, operates a corporate research institute and conducts research on AI and smart radar technologies, and holds about 10 patents. In addition, our company is conducting joint research and projects with leading domestic companies and universities based on technology, and has signed MOUs with 15 companies from 13 countries to prepare for overseas service expansion.

Vision

Dream Guide Company focuses its efforts on popularization of future oriented projects that realize values of human, information, and sharing economy.

Business

Dream Guide Company manages the safety of students through the IoT student safety management system "School Check", and provides customized information management systems to kindergartens and schools.

In addition, we are preparing to switch the current system to a smart radar sensor based In-cabin monitoring system that can be applied to all vehicles such as passenger cars, vans, school buses, and logistics vehicles. In-cabin monitoring system is a convenient and safe service that measures the driver's heart rate in real time to manage safe driving and to detect occupant situations without any other device.

Core competitiveness

Dream Guide Company's IoT student safety management system 'School Check' automatically checks students' school bus boarding and school commuting without installing a communication kit in vehicles and schools, and only by carrying a student's wearable device or installing a smartphone APP. In addition, "School Check" automatically detects students wearing seat belts, shares emergency situations in real time, quickly responds to emergencies, and provides customized management services to manage various student information. Through a smart radar sensor based In-cabin monitoring system, our company plans to not only automatically check students' boarding of school buses without devices, but also provide services that can measure drivers and students' heart rates in real time to respond urgently to dangerous signals.

Dream Guide Company provides AIoT based smart factory system through various sensors and big data based artificial intelligence algorithms. In addition, research that can measure calories of food with deep learning algorithms and research that can measure body signals with smart radar sensors are being conducted through the R&D center. In collaboration with major universities, we are working on projects that can analyze health screening big data to scientifically diagnose customized health conditions, predict diseases, and provide health solutions.

CEO's greeting

I'm Byun Kyuchan, CEO of Dream Guide Company, which provides customized solutions to customers through AIoT and smart radar technology based projects.

Dream Guide Company provides the IoT student safety management system "School Check" to kindergartens, schools, and academies across the country.

In addition, we are preparing for the future through continuous R&D in line with Industry 4.0, which intelligently intelligentizes everything that makes up the business's supply chain, from smart manufacturing and factories to intelligent warehouse management and logistics

Dream Guide Company

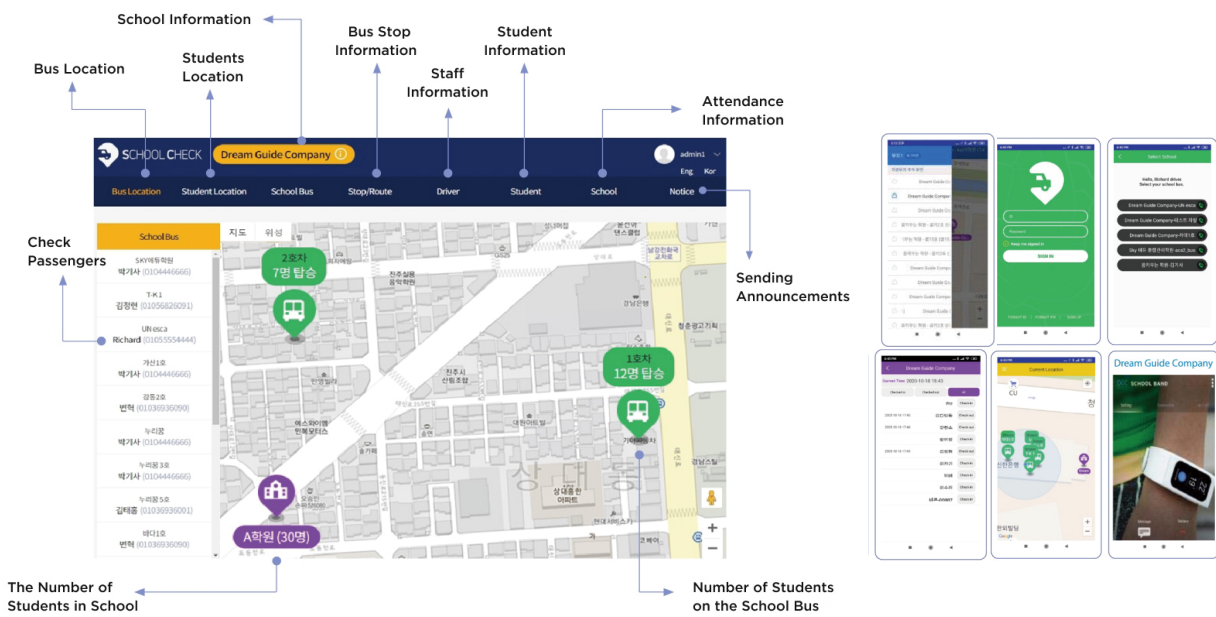

Company Introduction

Dream Guide Company focuses its efforts on popularization of future oriented projects that realize values of human, information, and sharing economy.

Founded in 2017, Dream Guide Company has been providing AIoT student safety management system 'School Check' to kindergartens, schools, and universities in Korea. In addition, our company supplied Smart Factory Systems, Factory Quality Management System Based on big data platforms, and ogistics management systems to large companies. Dream Guide Company operates a corporate research institute as a venture company, is conducting research based on AI technology and smart radar sensors, and holds 11 patents. In addition, it is preparing to enter into overseas services by signing MOUs with 15 companies in 13 foreign countries.

AIoT safety management system 'School Check'

'School Check' is a tailored management system designed to safeguard student safety, enabling seamless sharing of real-time student safety information among students, parents, and teachers, while also providing convenient management of students' data.
